## CL province: Monte Capodarso river Himera and mountain Sabucina

GENERAL INFORMATION : To receive the program in detail and specific content ,  
" Request Info" or contact the Center.

We stand at 1'30 " from catania, 2'0 " from palermo

Straddling the provinces of Enna and Caltanissetta we are in an area (RNO Monte Capodarso valley dell'Imera South ) which is one of the largest green lung spaces in the center of Sicily. The scenarios ( and difficulties ) offered range from surveys such as the mountains Sabucina (706 m) and Mount Capodarso (795 m) along the flat valley floor dell'Imera or hills in the middle.

The area is really full of things to see, the old mines of sulfur ( Giumentaro and Trabonella ) , farms vintage ( Marcatobianco ) real open-air museum of industrial archeology , archaeological sites ( Gibraltar gabib ) sites with prehistoric ages bronze age and the Hellenic era rock villages of Sicily, an intense present biodiversity of flora and fauna with paths that wind through narrow valleys and collected between limestone and sulphites , the waters of the same river , rich in salts , have an unusual flora more compatible with the marine areas . From the geological point of view is enough to remember that the whole area under examination is surveyed in Geopark 's network for the richness and variety of rocks and fossils .

The routes are varied in type, characteristics and difficulty , with easy routes into the valley absolutely horizontal on board river so rich in biodiversity ideal for walkers and non-sports school , move to more challenging trails , but not inaccessible to those who have only good legs particularly recommend the " rings " around the mountain Capodarso rich environments , views and content .

Important centers connected by visiting Petrapersia , Caltanissetta .
